Vegg

My Role: UX/UI Designer
Company: Vicharak
Tools: Figma

Smart, Without the Rework

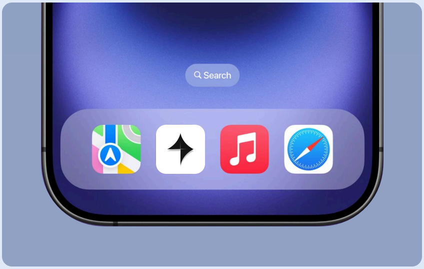
Just buy our device behind your existing switchboard and make your home smarter without rewiring.

A smarter home, designed around people.

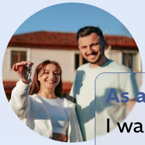
Vegg is a smart home ecosystem designed to connect everyday devices, simplify home control, and make automation more accessible.

The product brings together smart devices, controls, automation, monitoring, and insights into one connected experience.

As the product designer, I worked across the digital experience from information architecture and user flows to interface design, design systems, dashboards, and interactions.



User Story



As a homeowner

I want to control all my smart devices from one app so that I can manage my home effortlessly.

As a busy professional

I want my home to automate routine tasks so that I can save time and energy.

As a family member

I want real-time alerts about my home so that I can stay informed and feel secure.
